QUESTION

JSON Modification

Given students.json.

Task:

Add a new field called Grade based on marks.

Save the updated JSON into a new file.

CODE

```
import json
```

```
# Input JSON file path
```

```
input_file = r"C:\Users\R YASWANTH  
REDDY\Downloads\tenant_landlord_system\students.json"
```

```
# Read JSON file
```

```
with open(input_file, "r") as file:
```

```
    students = json.load(file)
```

```
# Add Grade field
```

```
for student in students:
```

```
    marks = student["marks"]
```

```
    if marks >= 90:
```

```
        student["Grade"] = "A+"
```

```
    elif marks >= 80:
```

```
        student["Grade"] = "A"
```

```
    elif marks >= 70:
```

```
        student["Grade"] = "B"
elif marks >= 60:
    student["Grade"] = "C"
elif marks >= 50:
    student["Grade"] = "D"
else:
    student["Grade"] = "F"

# Print updated JSON
print(json.dumps(students, indent=4))
```

OUTPUT

```
[
  {
    "name": "John",
    "marks": 95,
    "Grade": "A+"
  },
  {
    "name": "Alice",
    "marks": 82,
    "Grade": "A"
  },
  {
    "name": "Bob",
    "marks": 67,
    "Grade": "C"
  },
  {
    "name": "David",
    "marks": 45,
    "Grade": "F"
  }
]
```
